

Introducing The First Solid State Single Band 1 To 6 GHz Amplifier

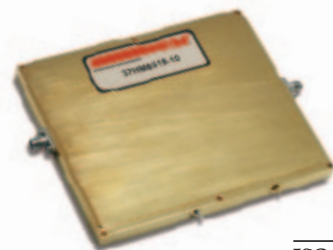

The latest addition to AR's "S Series" Solid State Microwave Amplifiers allows you to fulfil your wideband EMC and Wireless applications in one unit without the need for band switching.

Ranging from 15 to 50W with an instantaneous bandwidth of 1–6 GHz, these Class A amplifiers offer excellent flatness at an input power of 1 mW. With low harmonic distortion & noise figures they are ideally suited for the most demanding of applications.

If you like the convenience of a remote interface you'll be glad to know that this comes as standard on the "S Series" at no extra cost! As with all AR products, they are backed by a worldwide support network that is second to none.

If you don't require a complete instrumentation amplifier we offer our solid state 15W Class A and 25W Class AB modular hybrid power amplifiers covering the same frequency range.

Contact us for more information on the latest S Series amplifiers or any of the products offered by AR.
